## Interview Questions

15m

**1. What is the major difference between tuples and lists in Python?**

**Answer:** There are several major differences between tuples and lists in Python, which include the following:

### Tuples

- Tuples are similar to a list, but they are enclosed within parenthesis, unlike the list.
- The element and size can NOT be changed.
- They cannot be updated.
- They act as read-only lists.
- Tuples are surrounded by ( )
- Example of Tuple Code is, tup = (1, "a", "string", 1+2)

### Lists

- The list is used to create a sequence.
- The element and size can be changed.
- They can be updated.
- Lists are surrounded by [ ]
- Example of Lists Code is, L = [1, "a", "string", 1+2]

## 2. What is the difference between a primary key and a unique key?

**Answer:** Both primary and unique keys carry unique values, but the primary key cannot have a null value while the unique key can have it. And in a table, there cannot be more than one primary key, but it can have multiple unique keys.
